Special  
VAPP

**SBNE**

**SPECIAL  
APPLICATIONS**

- Infeed belts that avoid scuffing of the cartons and give positive infeed control.
- Independent motions for case extraction from the magazine and case erection allow more tolerance in case dimensions without detriment to the performance of the machine.
- The machine has the flexibility to exit with complete shipping cases at 3 m high level or at 440 mm low level with a simple touch on the Operator Panel
- Photocells check the correct contents of each case; if a carton is detected missing, the anomaly is signalled inhibiting the case sealing on one side thus allowing manual filling of the same
- Both collating and case filling sectors are entirely mechanical therefore stopping and starting the machine any time is possible without any adverse effect.
- The self-adhesive tape applicators are SENZANI-designed and manufactured; they are equipped with pre-unwinding facility actuated by mini-motors ensuring constant application conditions in all circumstances.
- The water-soluble tape applicators are also SENZANI-designed and constructed. The tape is never dampened before the arrival of the case at the sealing station; moreover, thanks to a particular drive mechanism, the tape is released at exactly the same speed as that of the case passing by.
- Strategically-placed safety couplings ensure protection and correct timing of all main machine mechanisms.
- In case of an anomaly during machine operation, a visual display panel clearly highlights the location of the problem.
- Accessibility is excellent in spite of a very compact lay-out.

CARTON BUFFER  
VERTICAL CARTON STACKING SYSTEM

## TECHNICAL DATA

CASE SIZE

min 350x210x220 mm  
max 550x390x620 mm

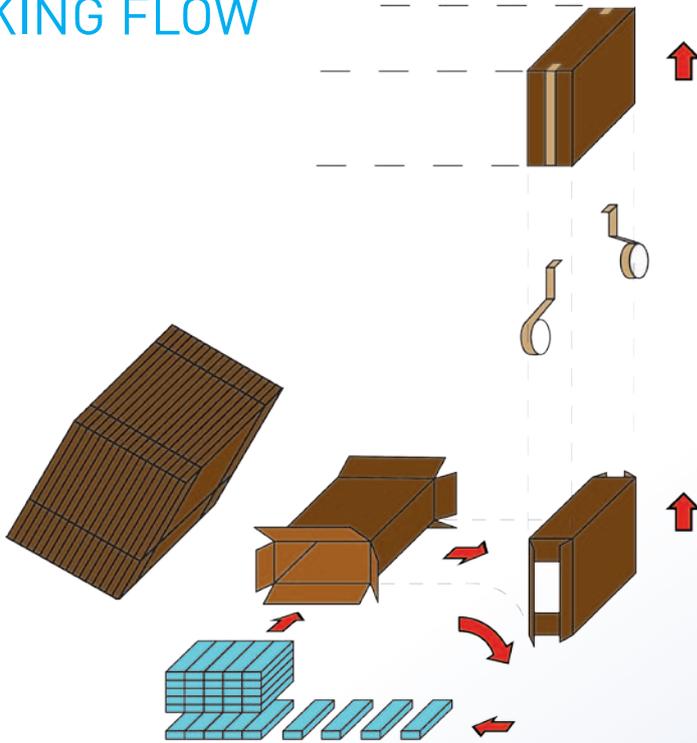

SPEED

up to 10 cpm
